```

- 1 row for each connected plane (=PM) where there are at least 2 hits in the event.
- Time correlation computed on the basis of the fine time counter (3rd column).
- 1 event = a majority of PM (=3 in this example) PM within the time coincidence window (=20 time unit=200 ns by default).

Column Number	Signification	Unit	Range
1	Unix time	second	0..infy
2	Event number	Incremental integer	0..infy
3	Fine timestamp	10 ns	0..999999999
4	TDC integer 1	Integer	0..15
5	TDC integer 2	Integer	0..15
6	Plane number	Integer	0..2
7	Quality check	Integer	0..1
8	Quality check	Integer	0..1
9	Number of hit strips = Nhits	Integer	2..64
10-12..[modulo 2]	Channel number	Integer	0..63
11-13..[modulo 2]	ADC value	Integer	0..4095
